

Abstract of the Disclosure

A gaming apparatus may include a display unit capable of generating video images, a value input device and a controller operatively coupled to the display unit and the value input device. The controller may comprise a processor and a memory, and may be programmed to allow a person to make a wager, to make an automated selection from among a plurality of user-selectable options presented to the player, to cause a video image representing a game to be generated on the display unit, and to determine a value payout associated with an outcome of the game.
